

Appendix 4. Definition of baseline characteristics using diagnostic and procedural codes

Characteristic	Database	Codes
Age	RPDB	
Sex	RPDB	
Neighbourhood income	RPDB	Neighborhood income quintiles were defined using methods developed at Statistics Canada based on 2001 Dissemination Areas, which are the smallest geographic areas for which Canadian population data are released. This indicator is a household size-adjusted measure of income adequacy based on Census summary data for each Dissemination Area, which have average population sizes of 400 to 700. ⁵⁰
