

Appendix 1 (as supplied by authors): Time programmed COX regression model for the assessment of the risk for spontaneous abortions following exposure to Non-selective COX inhibitors

Characteristic	Hazard Ratio	95% Confidence Interval	
Non-selective COX Inhibitors	1.10	0.99	1.22
Hypothyroidism (yes/no)	0.76	0.62	0.94
Diabetes mellitus(yes/no)	0.65	0.49	0.86
Hypercoagulable state (yes/no)	3.72	1.67	8.29
Tobacco use (yes/no)	1.52	1.29	1.78
Uterine disorders (yes/no)	17.41	7.24	41.85
Inflammatory disease (yes/no)	1.41	0.78	2.62
In vitro fertilization (yes/no)	0.81	0.66	0.99
Contraceptive device (yes/no)	2.99	2.26	3.95
Mother's Age (years)	1.04	1.03	1.04
Ethnic group (Bedouin/Jews)	0.81	0.77	0.85
Obesity (yes/no)	0.83	0.57	1.21
