

Appendix 2 (as supplied by authors): Time programmed COX regression model for the assessment of the risk for spontaneous abortions following exposure to Selective COX2 inhibitors

Characteristic	Hazard Ratio	95% Confidence Interval	
Non-selective COX Inhibitors	1.43	0.79	2.59
Hypothyroidism (yes/no)	0.78	0.63	0.97
Diabetes mellitus(yes/no)	0.70	0.53	0.94
Hypercoagulable state (yes/no)	3.59	1.61	7.99
Tobacco use (yes/no)	1.52	1.28	1.79
Uterine disorders (yes/no)	16.91	7.03	40.67
Inflammatory disease (yes/no)	1.28	0.66	2.47
In vitro fertilization (yes/no)	0.84	0.68	1.04
Contraceptive device (yes/no)	3.19	2.40	4.24
Mother's Age (years)	1.04	1.03	1.04
Ethnic group (Bedouin/Jews)	0.80	0.75	0.84
Obesity (yes/no)	0.76	0.51	1.14
