

**Appendix 4: Association between sudden death and recent antibiotic use in matched subset**

<b>Antibiotic exposure in preceding 14 days</b>	<b>Group, no. (%)</b>		<b>OR (95% CI)</b>	<b>Adjusted OR* (95% CI)</b>
	<b>Cases n = 148</b>	<b>Controls n = 231</b>		
TMP/SMX	33 (22.3)	30 (13.0)	2.16 (1.06–4.39)	1.94 (0.93–4.04)
Nitrofurantoin	25 (16.9)	57 (24.7)	0.82 (0.39–1.70)	0.90 (0.43–1.90)
Norfloxacin	12 (8.1)	19 (8.2)	1.27 (0.55–2.92)	1.38 (0.58–3.30)
Ciprofloxacin	48 (32.4)	63 (27.3)	1.58 (0.86–2.90)	1.40 (0.73–2.67)
Amoxicillin	30 (20.3)	62 (26.8)	1.00 (ref)	1.00 (ref)

Note: CI = confidence interval, OR = odds ratio, ref = reference group, TMP/SMX = trimethoprim-sulfamethoxazole.  
\*Adjusted for duration of spironolactone use.
